Experience

Front End Support specialist Tier I | Dealer E Process

April 1st 2024 -present

- Experience in 3rd party code integration
- Experience using a ticket CRM (Hubspot)
- Handling customer relations (phone & email)
- CSS, HTML, JS, PHP, SQL
- Daily Google Meets/chats
- CI/CD Development Process (Jira)
- Utilize CMS
- Site Speed analysis and optimization
- Communications & collaborations with other departments (OEM, Design, Development, and more)

Frontend Web Developer Intern | Harold Jean Louis Inc,

Oct. 2023- Dec. 2023

- Worked as a remote frontend Developer intern for an accounting firm called Harold Jean Louis located in New York, New York.
- Utilized Google Meet once a week to provide deliverables of the work we had completed the week prior. Some work I did required an NDA and will not be named.
- I worked on websites for clients within the company and mocked, wireframed, and developed the pages through the Wordpress content management system and Elementor.

Education

● High School

2016- 2020

● Southern New Hampshire University  SNHU

2022-May 2027

- Bachelor of Science, Computer Science SWE+

GPA: 3.4

Core Classes Taken

- Software Security
- Discrete Mathematics
- Computer Graphics
- Structured Database Environments
- Object Oriented Programming (OOP)
- Software Development LifeCycle (SDLC)
- Operating Platforms
- Data Structures & Algorithms

Languages & Dev Tools

TypeScript, JavaScript (JSX), Python, Java, C++, SQL

Git, GitHub, VS Code

Databases & Cloud

PostgreSQL, Supabase, MySQL, Vercel, AWS

Frameworks & Libraries

Next.js, React.js, Express.js, Flask
Tailwind CSS, Mantine UI, shadcn/ui

Authentication & APIs

Supabase Auth, OAuth (Google), REST APIs, Postman

Personal Projects

- **KB'S Kustomz Version 2 | NEXT.JS Website + CMS**

- This is version 2 of the Autobody website I developed for a client Built a production-ready auto body shop website and custom CMS using Next.js, Supabase, and Vercel. (Live Site)
- Leveraged Server-Side Rendering (SSR), Server Actions, and cache revalidation with tags to improve performance and reduce server load.
- Designed a secure authentication and authorization system using Supabase Auth (PKCE), Next.js Proxy for role-based access control, and Supabase Row Level Security (RLS) policies.
- Implemented a Supabase PostgreSQL database with triggers for automatic updated_at timestamps and Vercel Blob Storage for media management.
- Deployed and maintained the application on Vercel with production-ready caching and documentation.
- Documentation

- **JarvisBot Discord Bot**

- Developed a Discord bot that provides Marvel Rivals character summaries using AI-generated responses.
- Built with Discord.py.
- Integrated Google GenAI to generate character summaries and answer user queries.
- Deployed on an Oracle Cloud Infrastructure (OCI) Always Free Compute Instance for 24/7 availability.
- [Github Repo Here](#)
- [DEMO Here](#)

- **Python Regression Analysis on US Opioid Deaths**

- Developed analytical models to analyze and predict U.S. opioid-related death rates using historical datasets.
- Built and compared multiple regression approaches, including Linear Regression, Polynomial Regression, and Polynomial Regression with dataset splitting.
- Evaluated model performance to determine the most effective method for predicting 2021 opioid death rates.
- Utilized Python, data analysis libraries, and statistical modeling techniques to extract insights from public health data.
